Phuoc V. Le

bill2682004@gmail.com | (657)-262-6714 | github.com/something0412 | linkedin.com/in/phuocvinhle | Houston, TX

EDUCATION

University of Houston | **Houston, TX** **Expected Graduation: Jun 2028**

B.S. in Computer Science | GPA: 3.7/4.0

Relevant Courses: Algorithms and Data Structures, Database Systems, Computer Organization and Architecture

Honors: Dean's List

Bellevue Community College | **Bellevue, WA** **Sep 2022 - Jun 2024**

Associate's in Arts and Sciences - Computer Science Focus

SKILLS

Cloud & DevOps: AWS, Docker, Linux, Bash

Languages: Python, Java, C++, TypeScript, C#, SQL, HTML/CSS

Frameworks & Tools: React, Node.js, Git, Flask, WebSocket, PostgreSQL, OpenCV

PROJECTS

Spacecraft Telemetry Pipeline **May 2026 - Jun 2026**

Personal

- Engineered a full-stack spacecraft telemetry pipeline simulating **realistic sensor drift** via random walk algorithm with periodic out-of-bounds spike injection to trigger anomaly detection
- Built a FastAPI **REST ingest server** with Pydantic validation that **evaluates anomaly bounds** on every incoming packet and persists results with a **full audit trail** in SQLite
- Developed a live TypeScript/Chart.js dashboard that polls the query API every 2 seconds and surfaces a **real-time anomaly alert** banner on out-of-range sensor readings

Voice-Vault **Dec 2025 - Jan 2026**

Personal - d4qejj20t2b30.cloudfront.net

- Built and deployed a full-stack serverless web application using Amazon Polly for AI-powered text-to-speech, with a React (Vite) frontend hosted on S3 and **delivered globally** via CloudFront.
- Implemented **secure file uploads/downloads** with S3 **pre-signed URLs** and handled environment configuration, access control (IAM), and monitoring through CloudWatch.

EXPERIENCES

Energy AI Solutions | **Houston, TX** **Jun 2026 - Present**

Full-Stack Software Development Intern

- Debugged and maintained a full-stack job-scraping pipeline (Python + React), resolving broken queries and duplicate/malformed records across **5,000+ listings**, cutting **stale/incorrect data by 50%+**
- Built a regex-based location classifier to tag **30,000+** scraped job listings by country at scrape time, replacing an unindexed 80-condition filter with a sargable lookup, improving load latency by about **98% (42s → ~800ms)**
- Shipped **2** full-stack AI-scored practice features (Mock Interview, Elevator Pitch) with admin-configurable rubrics, implementing a **rolling 30-day usage window** to track and auto-reset free-tier attempt limits with no scheduled job required
- Diagnosed and fixed a production-only outage that silently blocked the audio playback/generation across both AI features, by replacing a blocked token-based Azure auth pattern with direct key-based access

Code [Coogs] - University of Houston Organization | **Houston, TX** **Jun 2026 - Present**

Software Development Officer

- Optimized page load and data-fetching performance on the club's public website (Next.js), reducing load time by **approximately 20%**
- Fixed UI bugs and restructured the Supabase database for the members' web app - added missing foreign keys, and backfilled missing data - improving reliability for **60+ active members**

Computer Programming Club - Bellevue College Organization | **Bellevue, WA** **Sep 2023 - Jun 2024**

Treasurer

- Designed and managed a **financial tracking system** in Excel, producing reports on budget and resource allocation for the executive board
- Collaborated with leadership to create a detailed budget, leading and securing funding for major events
