Phuoc Vinh Le

bill2682004@gmail.com | (657)-262-6714 | github.com/something0412 | linkedin.com/in/phuocvinhle | Houston, TX

EDUCATION

University of Houston | **Houston, TX** **Expected Graduation: Jun 2028**

B.S. in Computer Science | GPA: 3.7/4.0 | Dean's List

Relevant Courses: Algorithms and Data Structures, Database Systems, Computer Organization and Architecture

Bellevue College | **Bellevue, WA** **Sep 2022 - Jun 2024**

Associate's in Arts and Sciences - Computer Science Focus

SKILLS

Languages: Python, TypeScript, JavaScript, Java, C++, SQL, HTML/CSS

Framework: React, Next.js, Node.js, Express, Flask, FastAPI, Jest

Data & Cloud: PostgreSQL, Supabase, SQLite, Azure (Blob Storage, AI Speech, AI Foundry), AWS, Vercel

Tools: Git, GitHub (PR reviews), Linux, Bash, REST APIs

EXPERIENCE

Energy AI Solutions | **Houston, TX** **Jun 2026 - Present**

Full-Stack Software Development Intern

- Built and shipped **two AI-scored interview-practice features** end-to-end (Python/Flask, React, Azure AI Foundry): text-to-speech prompts, audio storage in Azure Blob Storage, speech-to-text, and LLM scoring against admin-configurable rubrics
- Stopped speech-to-text from **hallucinating transcripts** of silent or noisy recordings by adding pre-transcription checks for volume, minimum length, and long silences, so only real answers reach LLM scoring
- Diagnosed a **production-only outage** that broke audio in both AI features: with no cloud log access, built a database-backed error log, traced failures to firewall-blocked token requests, and moved to key-based auth stored in server-side environment variables
- Cut job-listing load time from **~42s to ~800ms** on a 30K+ listing production database by replacing an ~80-clause NOT LIKE filter with a regex country classifier in the nightly scrape job and an indexed country column
- Normalized the scraper's schema into a unique-listings table with a one-to-many locations table, eliminating **~25% redundant rows**, and added a 14-day retention cleanup to the nightly job to bound table growth

Code [Coogs] - University of Houston Organization | **Houston, TX** **Jun 2026 - Present**

Software Development Officer

- Optimized page load and data-fetching performance on the club's public website (Next.js), reducing load time by **approximately 20%**
- Added missing foreign keys and backfilled data in the members' web app's Supabase database, improving data integrity for 60+ active members, and resolved 25+ member-reported UI bugs

PROJECTS

Medical Clinic Management System | React, TypeScript, Express, PostgreSQL, Vercel **Aug 2026 - Oct 2026**

Technical Lead, 5-person team (Database Systems course project)

- Led a **5-person team as technical lead**: set up the initial codebase, reviewed teammates' pull requests before merging, and deployed the frontend and backend to Vercel
- Designed the PostgreSQL schema and built the billing system's REST endpoints and triggers, including automatic invoice totals and an audit trail that rejects changes without an identified employee or patient
- Built session-based authentication and **role-based access control (RBAC) for 6 user roles**, enforcing role checks on every API endpoint and scoping queries to the session's user ID
- Built most of the React/TypeScript frontend, connecting it to teammates' API endpoints and manually testing end-to-end workflows for all 6 roles
- Wrote Jest tests for the billing system verifying that invoice totals equal the sum of their line items and that the audit trigger rejects billing edits without an employee ID

Spacecraft Telemetry Pipeline | Python, FastAPI, Pydantic, SQLite, TypeScript, Chart.js **May 2026 - Jun 2026**

Personal Project

- Built a **FastAPI REST ingest service** with Pydantic validation that checks anomaly bounds on every incoming telemetry packet and stores readings with a full audit trail in SQLite
- Simulated realistic sensor drift with a random-walk generator and injected out-of-bounds spikes, surfaced by a live TypeScript/Chart.js dashboard that polls the API every 2s and raises anomaly alerts
